## What is Cryptocurrency?

Cryptocurrency is a digital or virtual form of money that uses cryptography for security. Unlike traditional currencies, it operates independently of a central bank. Cryptocurrencies leverage blockchain technology, a decentralized ledger that ensures transparency and security by recording transactions across a network of computers.

The concept of cryptocurrency began in the early **2000s**, but it wasn't until the launch of the first decentralized cryptocurrency in **2009** that it gained significant attention.

Since then, thousands of cryptocurrencies have been created, each with unique features and applications, marking a new era in the financial landscape.

## What Is Forex !

Forex is one of the most enormous and liquid markets around the globe. In 2010, the forex market accounted for more than 3 trillion dollars of daily trading. Over the last decade, a 40% increase in the daily volume of forex trade with 6.6 trillion Dollars each day is seen. This marks a nine-year peak since 2010. But the surprising fact is that the market did not exist a century ago. Unlike the stock market, we cannot trace the roots of the forex market.

# How Does Forex Market Work?

Forex trading works like any other transaction where you are buying one asset using a currency. In the case of forex, the market price tells a trader how much of one currency is required to purchase another.

For example, the current market price of the GBP/USD currency pair shows how many US dollars it would take to buy one pound.

## Our Crypto Spark Mission

Blockchain and tokenization are not just transforming our financial system, but also the ways in which we create and share value. We're harnessing the power of this technology to shape a new, better economy - a more efficient and equitable one, and one that works for the many, not just the few.
